SUMMARY

Senior QA Engineer with 10+ years of enterprise experience testing security products against real-world exploits at IBM Internet Security Systems and regulated financial platforms at Fiserv. Introduced security testing, led an offshore team, and built test infrastructure in high-stakes environments. Delivered end-to-end QA and established testing processes for startup and client projects across e-commerce, web applications, and SaaS platforms.

Hands-on with test automation since December 2025, building a comprehensive Playwright and TypeScript framework covering UI and API testing, CI/CD integration, and Jira/Xray reporting, augmented by AI-assisted development, code review, and test generation, while retaining human ownership of testing strategy and risk-based decisions.

CORE TECHNICAL SKILLS

- **Quality Assurance & Test Management:** Manual Testing, Exploratory Testing, Risk-Based Testing, Functional, Regression, Integration, System, UAT, Test Planning, Defect Management, Jira, Xray, Test Execution Reporting, Acceptance Criteria, Release Readiness, Agile/Scrum, SDLC
- **AI-Augmented Testing:** Claude Code, ChatGPT, Gemini, GitHub Copilot, Prompt Engineering, AI-Assisted Test Design, Test Generation, Requirements Analysis, Code Review
- **Test Automation, CI/CD & API Testing:** Playwright, TypeScript, Page Object Model, BDD/Gherkin, GitHub Actions, JUnit XML, REST APIs, Postman, Authentication and Response Validation
- **Security Testing & Technical Debugging:** Penetration Testing, IBM AppScan, Metasploit, Wireshark, WinDbg, Active Directory, IIS, SQL Server
- **Domain Experience:** FinTech, Payments, Risk and Compliance, Regulated Financial Systems, Blockchain and Digital Assets

EXPERIENCE & INDEPENDENT PROJECTS

Senior QA Engineer | Independent Project Work

December 2025 – Present | Atlanta, GA (Remote)

GitHub: github.com/Passtelle/playwright-enterprise-framework

- Built a comprehensive end-to-end Playwright test automation framework from scratch: a hands-on demonstration of modern QA capabilities across banking workflows, API authentication, and security scenarios.
- Implemented 17 Page Object Models to isolate UI changes and improve the maintainability and resilience of the test suite.
- Developed and ran a multi-LLM agent workflow for framework architecture, test generation, and code review: Claude Code as implementer, Claude AI as coach, Gemini as independent auditor, me as architect, keeping strict TypeScript standards throughout.
- Integrated GitHub Actions through the API so every commit automatically creates a Jira Test Execution, eliminating manual test reporting.
- Debugged a CI/CD pipeline failure that prevented JUnit XML generation on clean runs, traced the root cause, and restored reliable test results flowing into Xray.

Market & Product Analyst | IB Croc LLC

February 2023 – November 2025 | Atlanta, GA (Remote)

- Customized and trained an LLM trading assistant to analyze complex market data, spot high-probability patterns, and write custom Pine Script indicators to validate entry/exit signals under high-volatility conditions.
- Managed and grew a personal digital-asset portfolio using technical analysis, volume data, and price action to guide trade execution with strict position sizing and risk assessment.
- Managed asset security and self-custody through cold-wallet storage and transaction verification, maintaining direct control of portfolio assets.
- Conceived and designed DigitPilot (digitpilot.io), a digital-asset education platform: built the product structure and interactive prototypes using Figma AI, incorporating personal Blockchain/Web3 domain knowledge and turning personal market experience into a structured learning concept and website.

Freelance Senior QA Engineer | Self-Employed

September 2011 – December 2015 | International Clients (Remote)

- Delivered end-to-end QA for 15+ client projects across e-commerce, web applications, SaaS, and early-stage startups, identifying critical defects before production.
- Built test plans, defect workflows, and release checklists for clients without an established QA process, helping turn inconsistent releases into more predictable delivery cycles.

Senior QA Analyst II | Fiserv

April 2008 – September 2011 | Atlanta, GA

- Owned end-to-end QA for the Fiserv Risk and Compliance Framework, a large-scale .NET platform used by US financial institutions, covering functional, regression, integration, security, and database testing using SQL Server front/back end across multiple release cycles.
- Introduced penetration and security testing to the Fiserv QA practice, applying hands-on IBM security experience to identify vulnerabilities before production deployment.
- Tested Web Services using LINQ and managed project schedules and weekly QA status reports for leadership, maintaining visibility into quality risks and release readiness.
- Escalated significant quality risks to leadership and supported decisions to delay releases when platform stability was at risk.
- Built and maintained production-like test environments using Domain Controllers, SQL Server, Active Directory, and IIS, reducing IT dependencies and giving the QA team greater testing autonomy.

Senior QA Engineer | IBM Internet Security Systems

September 2000 – April 2008 | Atlanta, GA

- Tested enterprise security products, including antivirus, firewalls, IDS/IPS, and buffer overflow prevention, against real-world threats using Metasploit, live malware, and network exploits. Configured and maintained the full QA lab, test environments, and tooling.
- Led a team of six offshore QA engineers through a full project cycle, training them on processes and standards, then transitioning ownership so the team could operate independently. Also trained new QA hires and the Support Team on testing procedures and security tools.
- Led multiple project workstreams including third-party encryption compatibility (PGP, Utimaco), creating test plans from product requirements with coverage across operational, performance, usability, and regression testing on multiple platforms.
- Performed kernel-level crash analysis using WinDbg and Sysinternals to identify root causes of complex defects that standard testing methods could not reproduce.

PORTFOLIO

QA Automation Portfolio | github.com/Passtelle/playwright-enterprise-framework

Portfolio project: Playwright framework with 17 Page Object Models, a four-layer API test suite, CI/CD integration through GitHub Actions and Jira/Xray, and a multi-agent AI workflow for code generation and review. Built as a hands-on demonstration of modern QA engineering.

PRIVATE VENTURES

January 2016 – January 2023

Planned career break to focus on personal priorities and manage private business activities.

CERTIFICATIONS

- **ISTQB Certified Tester – Foundation Level | ASTQB | 2026**
- **ASTQB Testing Using AI | In Progress**
- **Anthropic AI Certifications | 2026** – Claude Code in Action; Claude Code 101; Claude 101; Model Context Protocol: Advanced Topics; Introduction to Model Context Protocol; Introduction to Agent Skills; AI Fluency Framework & Foundations

EDUCATION & LANGUAGES

MCSE: Microsoft Certified Systems Engineer | ID: 1981994 | VUE Testing Center, UK

Associate Degree, French Law | University Paris XII

Languages: English (Fluent) | French (Native)
